 CC This sequence represents a cleavable peptide linker which is a component
 CC of the chimeric proteins hGH-mini-proinsulin (AAY42860) and the chimeric
 CC protein given in AAY42861. These chimeric proteins additionally contain
 CC an N-terminal fragment of human growth hormone (hGH) and a human insulin
 CC precursor (AAY42859) The hGH portion of the chimeric protein acts as an
 CC intramolecular chaperone (IMC) for the insulin precursor, enabling it to
 CC fold correctly. The cleavable peptide linker has a C-terminal Arg residue
 CC (AAY42857) which enables the hGH portion of the chimeric protein to be
 CC removed after folding has taken place. Production of recombinant human
 CC insulin via an hGH-proinsulin chimeric protein can provide human insulin
 CC with correctly linked cysteine bridges with fewer necessary procedural
 CC steps, and hence resulting in a higher yield of human insulin. The IMC
 CC sequences not only protect insulin sequences from intracellular
 CC degradation by a microorganism host, but also promote the folding of the
 CC fused insulin precursor, facilitate the solubility of the fusion protein
 CC and decrease the intermolecular interactions among the fusion proteins,
 CC thus allowing folding of the fused insulin precursor at commercially
 CC useful high concentrations. The procedural steps of cyanogen bromide
 CC cleavage, oxidative sulfitolysis and related purification steps can thus
 CC be eliminated, along with the use of high concentrations of mercaptan or
 CC the use of hydrophobic absorbent resins

 PS Claim 14; Page 30-31; 46pp; English.
 XX
 CC This sequence represents a chimeric protein, which contains an N-terminal
 CC fragment of human growth hormone (hGH) of the sequence given in AAY42856,
 CC a cleavable peptide linker (AAY42857), and a human insulin precursor
 CC comprising insulin A and B chains (AAY42859). The hGH portion of the
 CC chimeric protein acts as an intramolecular chaperone (IMC) for the
 CC insulin precursor, enabling it to fold correctly. The cleavable peptide
 CC linker has a C-terminal Arg residue which enables the hGH portion of the
 CC chimeric protein to be removed after folding has taken place. Production
 CC of recombinant human insulin via an hGH-proinsulin chimeric protein can
 CC provide human insulin with correctly linked cysteine bridges with fewer
 CC necessary procedural steps, and hence resulting in a higher yield of
 CC human insulin. The IMC sequences not only protect insulin sequences from
 CC intracellular degradation by a microorganism host, but also promote the
 CC folding of the fused insulin precursor, facilitate the solubility of the

XX

CC This invention relates to novel, isolated full length human cDNA

CC molecules and the encoded proteins thereof. Specifically, it refers to

CC cDNA clones obtained by an oligo-capping method, where none of these

CC clones are identical to any known human mRNAs. The present invention

CC describes an immunoassay to identify agonists and antagonists, as well as

CC antibodies, antisense molecules and siRNAs that can all be used to bind

CC to and modulate expression of the cDNA molecules. As such, these
CC molecules are useful for diagnostic markers or therapeutic targets for
CC the various diseases or morbid states. In particular, they are useful in
CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC disease, Parkinson's disease, dementia, short memory and various cancers,
CC as well as for maintaining equilibrium of sense or motor function, and
CC for treating emotional reaction, fear response and panic. Accordingly,
CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC cytostatic and tranquiliser activities. This polypeptide is a protein
CC encoded by a full length human cDNA sequence of the invention. NOTE: This
CC sequence is not given in the sequence listing of the specification but
CC can be obtained on CD-ROM from the European Patent Office, Vienna Sub-

CC allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome)
CC disorders, or infections. These are also useful in assessing the effects
CC of exogenous compounds on the expression of nucleic acid and amino acid
CC sequences of NAAP. The NAAP or its fragments are useful in screening
CC compounds for effectiveness as agonist or antagonist of the polypeptides,
CC or in altering the expression of the target polynucleotide and compounds
CC that specifically bind to or modulate the activity of the polypeptide.
CC The microarray is useful in monitoring or measuring protein-protein
